DISCLAIMER

This document includes certain statements that constitute “forward-looking statements” and “forward-looking information” within the meaning of applicable securities laws (collectively, “forward-looking statements”). Forward-looking statements include statements regarding Antler Gold Inc.’s (“ANTL”) intent, or the beliefs or current expectations of NWA’s officers and directors. Such forward-looking statements are typically identified by words such as “believe”, “anticipate”, “estimate”, “project”, “intend”, “expect”, “may”, “will”, “plan”, “should”, “would”, “contemplate”, “possible”, “attempts”, “seeks” and similar expressions. Forward-looking statements may relate to future outlook and anticipated events or results.

By their very nature, forward-looking statements involve numerous assumptions, inherent risks and uncertainties, both general and specific, and the risk that predictions and other forward-looking statements will not prove to be accurate. Do not unduly rely on forward-looking statements, as a number of important factors, many of which are beyond ANTL’s control, could cause actual results to differ materially from the estimates and intentions expressed in such forward-looking statements. These factors include, but are not limited to the inability to obtain approval of the proposed consent by regulatory approvals and the other regulatory approvals and the occurrence of any other event, change or other circumstance that could give rise to the termination of the Option Agreement, or the delay of consummation of the transaction or failure to complete the agreement or exploration program for any other reason.

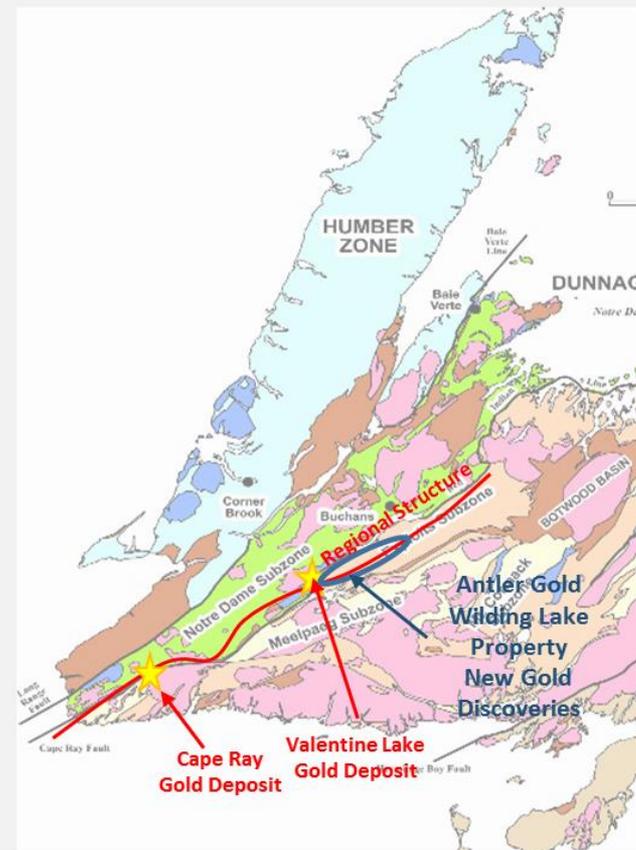

Forward-looking statements speak only as of the date those statements are made. Except as required by applicable law, ANTL does not assume any obligation to update, or to publicly announce the results of any change to, any forward-looking statement contained herein to reflect actual results, future events or developments, changes in assumptions or changes in other factors affecting the forward-looking statements.

ANTLER
GOLD

THE CENTRAL NEWFOUNDLAND GOLD BEARING SUTURE ZONE

- In 2016 Altius assembled a land position of 6 gold properties in central Newfoundland controlling 90km of a regional structure with newly recognized significance to gold mineralization.
- The structure hosts gold mineralization from Cape Ray to Moosehead (over 300Km), including newly defined resources at Marathon Gold's Valentine Lake of 1,388,200 Oz gold M&I and 766,500 Oz Inferred.
- Antler Golds new Wilding Lake project discoveries are located contiguous to the eastern side of the Valentine property with the discovery of six new gold zones in 2016 that include gold results of 6.0g/t over 8.5m, 8.7g/t over 6.7m and 49.3g/t over 4.6m.
- The structure is characterized by the presence of Silurian sedimentary rocks, the Rogersons Lake Conglomerate along Noel Pauls Line in the northeastern half and The Windsor Point Complex on the Cape Ray Fault in the southeastern half.
- The Cape Ray Fault hosts the Cape Ray deposit with a current resource estimate of Indicated 367,000 Oz and Inferred 158,000 Oz of gold.

ANTLER OPTIONS ADDITIONAL ALTIUS PROPERTIES: KEY POINTS

- In March 2017 Antler Gold optioned from Altius Resources a 100% interest in 6 gold properties (420km²) controlling 90km of the regional gold bearing structure.
- Antler Gold in November 2016 acquired an option for a 100% interest in the Wilding Lake project (215km²) covering 50km of the prospective regional gold bearing trend from Altius Resources.

Advantage to Antler:

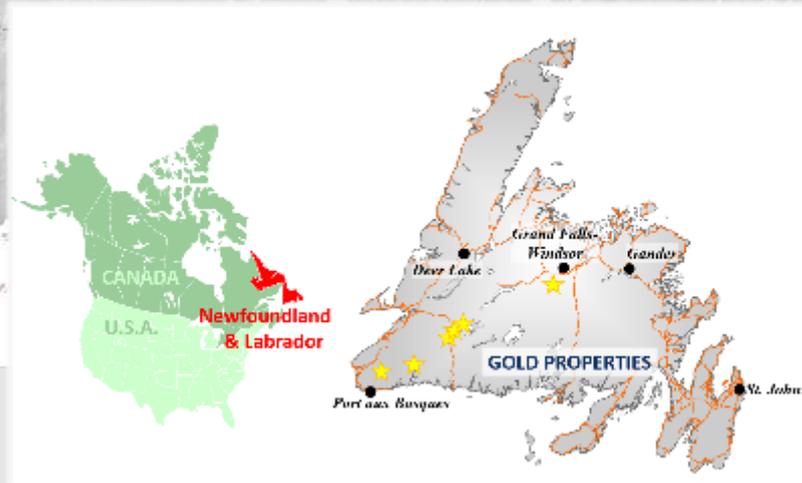

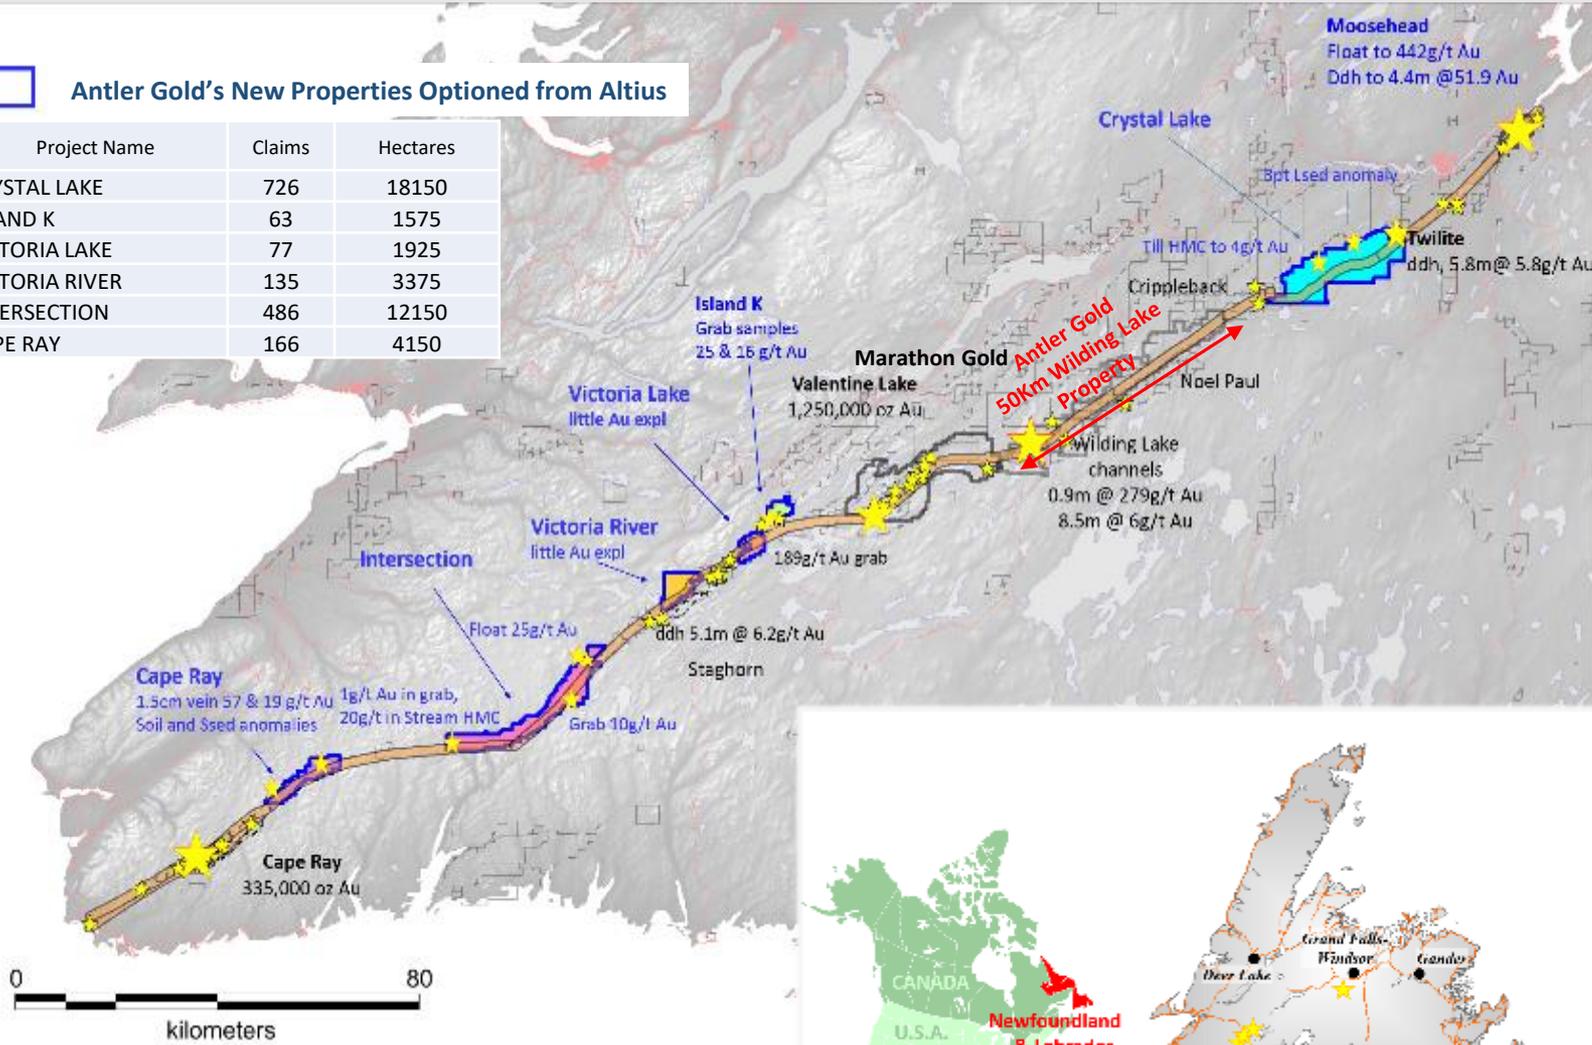

- A district scale property package situated along a 300km gold prospective regional structural fault system in an emerging gold camp:
 - Antler has tripled its land holdings and is now the major gold exploration player in Central Newfoundland
 - Controls approximately 140km of the regional gold bearing trend
 - Total property land package is 635km²
- Except for Marathon's Valentine Lake and Benton's Cape Ray gold deposits the regional gold bearing trend has seen little historical systematic exploration.
- The discovery by Antler of 6 new significant gold showings in late 2016 with systematic exploration on only 2km of its 50km Wilding project proves the upside potential of the entire gold bearing regional trend.
- The new Antler properties host similar geological characteristics found at the Cape Ray and Valentine Lake gold deposits, and the new gold discoveries at Antler's Wilding Project.

ANTLER NEW GOLD EXPLORATION PROPERTIES

Antler Gold's New Properties Optioned from Altius

Project Name	Claims	Hectares
CRYSTAL LAKE	726	18150
ISLAND K	63	1575
VICTORIA LAKE	77	1925
VICTORIA RIVER	135	3375
INTERSECTION	486	12150
CAPE RAY	166	4150

NEW PROPERTIES: SUMMARY

Project Name	Claims	Hectares	Length on Structure km	Notes
CRYSTAL LAKE	726	18,150	29	Gold anomalies in Till and lake sediments. 25km of favorable host rocks proximal to structure.
ISLAND K	63	1,575	4 (splay)	Gold bearing samples taken in the 1930's, now flooded by Victoria Lake No subsequent exploration for gold
VICTORIA LAKE	77	1,925	3 (splay)	Little exploration.
VICTORIA RIVER	135	3,375	9.5	Little exploration.
INTERSECTION	486	12,150	37	Some exploration, 3 documented gold occurrences.
CAPE RAY	191	4,775	15	Geochemical indicators and local high grade veins
TOTAL	1,678	41,950	97.5
